WHOLESALE MANUFACTURERS OF

DOORS, GLAZED SASH, BLINDS

MOULDINGS, FINE STAIRWORK,
ART AND WINDOW GLASS, MANTELS, GRILLES,
PARQUETRY FLOORS

AND

EVERYTHING IN THE LINE OF MILLWORK IN ANY WOOD

NOTE

THIS CATALOGUE IS NOT COMPLETE UNLESS ACCOMPANIED
BY OUR PRICE SUPPLEMENT

ORDER BY NUMBER ONLY

CAUTION.

Owing to the duplication of numbers and names by various parties referring to entirely different subjects, care must be used to specify where the numbers or names are obtained.

We assume that numbers or names of designs (if they appear herein) refer to this catalogue unless otherwise specified. In referring to other catalogues simply give firm name and year of publication.

Copyrighted 1903 by E. L. Roberts & Co.

DO NOT CUT THIS BOOK

INTRODUCTORY

WE take pleasure in presenting to you our general catalogue number 500. More novel and useful features are to be found within its covers than in any sash and door catalogue yet published. We have replaced the stereotyped matter now in general use by absolutely new and original designs. This important change will enable the progressive dealer to secure orders from the critical buyers who demand stylish and tasteful goods. We have issued separately in supplement form the official sash, door and blind list, as it is much used in figuring bills and estimates, and much easier to handle than the heavier catalogue. We will be pleased to make quotations on anything in our line shown in other books or from architects' details. We trust that these catalogues will prove of mutual advantage and hope to receive your orders and inquiries.

E. L. ROBERTS & CO.

BIRDSEYE VIEW OF OUR IMMENSE PLANT—THE LARGEST IN CHICAGO.

DIRECTIONS FOR ORDERING
CIRCLE AND SEGMENT TOP WINDOWS.

FIG. 1

For window frames, circle inside and outside.

FIG. 2

For window frames, circle outside, square inside.

FIG. 3

For window frames, segment inside and outside.

FIG. 4

For window frames, segment outside, square inside.

Always use these
 figures, viz. 1, 2, 3 or 4
 in ordering
 segment or circle top
 windows or
 frames.

Windows made in the above styles can be filled with any number of lights required.

Always give the radius on segment, circle or gothic openings.

The regular radius of a circle top is $\frac{1}{2}$ the width and on segment and gothic top the full width of opening.

For elliptic or irregular openings always furnish pattern.

A window indicates two pieces. A sash indicates one piece. A pair of blinds indicates two pieces.

A blind indicates one piece. A set of sash or blinds indicates more than two pieces,
 and order should be accompanied with sketch.

DIRECTIONS FOR ORDERING.

Save valuable time by closely following the directions below.

Doors, blinds and sash are often ordered $1\frac{1}{4}$, $1\frac{1}{2}$ and 2 inches thick. Do not use these terms, as it only delays orders. The regular thicknesses are $1\frac{1}{8}$, $1\frac{3}{8}$ and $1\frac{1}{4}$ inches, and all other thicknesses must be made to order at extra price.

Unless otherwise specified, or covered by standing instructions to the contrary, we will understand all orders as calling for REGULAR WESTERN STYLES OF GOODS, as described in this Catalogue.

The universal rule in ordering mill-work is to give the width first and then the height.

WINDOWS AND SASH.

- A—The term Sash indicates a single piece.
- B—The term Window means two pieces, an upper and a lower Sash, made with either plain or check rail.
- C—In ordering regular sizes of Sash or Windows, give size of glass and number of lights and thickness; if a Window, whether check or plain rail; state whether open or glazed, and if glazed, whether with single or double strength glass.

D—In ordering odd sizes, give size of opening to be filled and describe as above.

E—When measurements are given in inches, it usually indicates the glass size, and we will so understand it; when given in feet and inches the outside measure or opening is understood.

F—In ordering segment, circle, gothic or elliptic top openings, see opposite page.

BLINDS.

In Ordering, Specify Whether Outside (O. S.) or Inside (I. S.) Blinds are Wanted.

- G—OUTSIDE BLINDS. In ordering Outside Blinds, if regular, give size of glass and number of lights in window for which they are intended and size of opening to be filled. If odd, give thickness and state if rolling slats (R. S.), stationary slats (S. S.), or half rolling and half stationary slats ($\frac{1}{2}$ R. S., $\frac{1}{2}$ S. S.) are required. If other than these styles are required, order must so state.
- H—The regular opening for Outside Blinds is one (1) inch longer than Check Rail Windows of corresponding glass size. Where Blinds of extra length for brick buildings are desired, order must so state and Blinds will then be made two (2) inches longer than sash opening.
- I—Our Standard Blinds are $1\frac{1}{2}$ inch thick, full rolling slats made for regular openings, as above described. When not otherwise specified we assume this to be the style desired, and fill orders accordingly.

J—INSIDE BLINDS. In ordering it is best to give exact outside measure of opening to be filled. Give thickness, number of folds and state if all panels, all slats or half panel and half slats, referring to style desired as shown in cuts on page 77, giving sketch of any unusual arrangement of panels.

K—If Blinds are to be cut, state how many times and give distance from top of window to center of meeting rail.

L—If Blinds are to fold into pockets, give size of pockets.

M—State quality, whether No. 1, for paint or oil finish.

N—When description of Window only is given, as in ordering O. S. Blinds, we furnish our standard measurement of Inside Blinds, which is the same as the check rail window opening, $1\frac{1}{2}$ inch thick, four fold where practicable, style made to cut once at check rail.

DOORS.

- O—In ordering always give width, height, thickness, number of panels and quality. If full instructions are not given, to save time in shipment, we assume that our Standard Door $1\frac{3}{4}$ inch. Four Panel O. G. "A" quality is desired, and will fill order accordingly.

P—If other than Four Panel O. G. Doors are required, for Panel Doors give number and ar-

rangement of panels and style of Sticking; for Sash Doors give number of style desired; indicate whether open or glazed, and if glazed, style of glazing.

Q—Where Moulded Doors are required state whether flush or raised mould is desired, and if to be moulded on one or two sides.

FRAMES.

R—In ordering, state whether for Outside or Inside Frames.

S—For Window Frames give size, thickness and full description of window, stating whether for frame, brick or brick veneer building, referring to styles shown on pages 71, 72, 73 and 74. If for frame or brick veneer building, give width of studding. If for brick building, give thickness of wall. State if frames are desired with or without pulleys.

T—For Outside Door Frames give size and thickness of door and state whether frames are required with stops or with rabbeted jambs, and if sill is to be pine or oak, referring to styles on pages 71, 72, 73 and 74. If for frame building, give width of studding; if for brick building, give thickness of wall.

U—For Inside Door Frames give size and thickness of door and width and thickness of jambs; state whether stops or rabbeted jambs are required.

MOULDINGS.

V—In ordering, give numbers as shown in this catalogue and name kind of wood. If other styles than are shown herein are required, furnish detail or sketch with correct measurements.

W—Unless otherwise instructed, we will fill orders with our Standard White Pine Mouldings, Paint Grade, in miscellaneous long lengths, 10, 12, 14 and 16 feet long.

OFFICIAL GRADES SASH, DOORS AND BLINDS.

Adopted by the Wholesale Sash, Door and Blind Manufacturers'
Association of the Northwest.

DOORS.

AAA. Oil Finish Doors.—Material for AAA. Oil Finish Doors must be clear, no white sap admitted. Workmanship must be good.

AA. Oil Finish Doors.—Material For AA. Oil Finish Doors must be clear, with the exception that white sap will be admitted, not to exceed twenty-five (25) per cent of the face of any one piece. Workmanship must be good.

A. Doors.—Material in A. Doors must be clear, with the exception that water stains and small pin knots not exceeding one-fourth ($\frac{1}{4}$) inch in diameter may be admitted. No piece to contain more than two (2) such defects, and no door more than five (5) such defects on each side; white sap not considered a defect. Workmanship must be good.

B. Doors.—Material in B. Doors may contain knots not to exceed one (1) inch in diameter, and blue sap showing on both sides not to exceed fifty (50) per cent in any one piece of the door, and gum spots showing on one side (1) of a piece only and other slight defects, shall not exceed ten (10) in number on each side and each white pine stile, bottom and lock rail must contain at least one (1) and not to exceed three (3) such defects; plugs admitted and not regarded as a defect. Slight defects in workmanship admitted.

C. Doors.—Material in C. Doors may contain all stained sap and small worm holes and fine shake; also knots not exceeding one and three-fourths ($1\frac{3}{4}$) inches in diameter. Twenty (20) defects may be allowed on each side, also slight defects in workmanship. Each piece of white pine in a No. C Door must contain a defect. Not more than six (6) defects allowed in any one piece.

D. Doors.—D Doors are regarded as a cull door and must contain large coarse knots and may contain rot, worm holes, shake and other serious defects.

A Standard Door may be through tennon, blind tennon or dowelled.

WINDOWS.

Check Rail Windows may contain two (2) knots three-eighths ($\frac{3}{8}$) inch in diameter or one red knot five-eighths ($\frac{5}{8}$) inch in diameter in each piece of a window. White sap and not over thirty-three and one-third ($33\frac{1}{3}$) per cent blue sap may be admitted in any one window. Workmanship must be good.

Plain Rail Windows and Sash may contain blue sap and small knots.

BLINDS.

No. 1. Outside Blinds must be made of clear lumber, except that small, sound pin knots, water stain and white sap may be admitted. Workmanship must be good.

WOODS ADMISSIBLE.

Woods other than Michigan, Wisconsin and Minnesota white pine admitted in Doors, Blinds and Windows, except Oil Finish Goods.

WINDOWS, SASH AND TRANSOMS.

PLAIN RAIL WINDOWS.

8-light plain rail windows, see page 2 of price supplement accompanying this catalogue.

CENTER GLASS DESIGN, R 187½ SIDE LIGHT GLASS DESIGN, R 188

Give sizes in writing for prices.

For other designs in lead and colors see pages 329 to 340.

WINDOW AND DOOR FRAMES.

There are many styles of frames used in various sections and cities of this country, and to avoid confusion in the operation of this department of our business, we show on following pages the standard frames of this market. Unless furnished with a detail showing different construction we always furnish frames for brick or stone buildings as shown on page 71, and for frame buildings as shown on page 72. We usually make inside door frames or jambs as follows:

For 2-in. studding and plastering 2 sides $\frac{7}{8} \times 3\frac{3}{4}$ and O G stop No. 8095 K.D.
" 4 " " " " 2 " $\frac{7}{8} \times 5\frac{5}{8}$ " " " " 8095 "
" 6 " " " " 2 " $\frac{7}{8} \times 7\frac{1}{2}$ " " " " 8095 "

In ordering or asking for estimate on frames read instruction at bottom of page 55 and study the details on pages 71, 72, 73 and 74 for style desired.

Always state whether they are to be put together or knock down and with or without pulleys. The quantity and kind of wood required regulates the price of frames. For this reason we prefer to make quotations on each requirement and can thus give you the benefit of best prices the specifications will warrant.

VENETIAN BLINDS.

Best Venetian Blind Made.

They do not interfere with draperies. See cut above.

Ordinary Venetian blinds originated in Europe several centuries ago, and are still universally used, which ought to be sufficient testimonial of their durability.

Our blind has many improvements, making it all the more desirable, and is the peer of anything made for a similar purpose.

They have constantly grown in public favor since their introduction several years ago, and there are now thousands of them in use in all parts of the United States, in all kinds of good buildings and residences.

They are made of thin wood slats 2 and $2\frac{3}{4}$ inches wide, hung on best woven ladder tapes; hang within window frames, between stop beads or jambs; are never swinging out in the room, "sticking fast" or "coming off the roller," and are perfectly noiseless in use and operation. Have a light, airy appearance, slats being but one-eighth inch thick, and an individuality in style and general make up, and are suitable for the finest mansions, country residences, club houses, hotels, hospitals, office and apartment buildings, court houses, schools and colleges, and verandas, as well as public and private buildings of less pretensions,—in fact, any place where a handsome, durable and handy device is wanted to control the light.

SEE NEXT PAGE.

VENETIAN BLINDS.

Above cut shows details and method of application.

They require no special frame, can be hung at the top, as this cut suggests, or hung at the side on brackets, as shown above. All hardware, fittings, cord, cord-holder, chain and staples for sill fasteners, everything complete goes with our blinds.

2-INCH SLATS

Are intended for residences, etc.

2 $\frac{3}{8}$ -INCH SLATS

Cost less, make a lighter blind, and are for larger windows, public buildings, etc., although either width is well adapted for any purpose.

For prices of Venetian blinds see page 32 of our price supplement accompanying this catalogue.

VENETIAN BLINDS.

DIRECTIONS FOR ORDERING.

By carefully following the sketches and using the form below delay and error will be avoided.

Reference can be made to the above cut to describe where dimensions are taken by saying if taken at "a," "b" or "c," and if taken at "c" how much lap was allowed on face of casing.
a—Between stop beads.
b—Between jambs.
c—Face of casing and tell how much if any lap has been allowed on each side.

CAUTION—Be careful to give exact dimensions.

Number of Blinds.	* Width between window jambs.	Height of frame from window sill.	Height of sill from floor.	Width of stop beads.	Width of jamb from stop bead to face of casing	Are slats to be 2 in. or 2½ in. wide?	Kind of Wood and Finish.
	Feet Inches	Feet Inches	Feet Inches	Inches	Inches		

* It is generally better to hang blinds between window jambs, but sometimes preferable to hang them between the stop beads; in the latter case the distance between the "stop beads" must be given, and at the head of the column the word "jambs" changed to "stop beads."

INSIDE FOLDING BLINDS.

Our inside blinds are unexcelled in every respect. Write us for discounts and we will be pleased to make the best quotations consistent with good workmanship and materials. We make them in any wood, and call special attention to our hardwood work.

R 196

R 196 A

R 196 B

For prices on inside folding blinds see page 30 of our price supplement accompanying this catalogue.

HILL'S PATENT SLIDING BLINDS.

Above section shows that no special frame is required to use our sliding blinds. The guideway is fastened on pulley stile, acting as a stop for the sash.

Read carefully opposite page in ordering or asking for estimate.

For prices on Hill's Patent Sliding Blinds see page 33 of our price supplement accompanying this catalogue.

HILL'S PATENT SLIDING BLINDS.

These sliding blinds are made $\frac{1}{2}$ -inch in thickness, and though constructed of light material possess great strength and lasting qualities.

Can be closed with the window raised and cannot blow open or rattle, thus giving the best medium of ventilation.

They do not interfere with curtains or window ornaments, and admit light and air from any part of the window.

These blinds are specially made to order in the white or finished complete; either varnished in the natural colors of the different woods or stained and varnished, or wood filled and cabinet or rubbed finish. All trimmings and hardware we furnish, which is included in the price of the blinds given on page 33 of our price supplement.

DIVISIONS IN WIDTH.

This has reference to the number of parts or panels in which each section is divided. To look well the divisions should not be excessively wide or narrow. The maximum widths given under each number of divisions in the price list will show panels about 7 inches wide, the minimum widths about 4 inches wide. This classification will always be used unless otherwise ordered.

PLEASE NOTE—That list prices include all necessary hardware or trimming, and in comparing costs with folding blinds or other makes of sliding blinds, this should be taken into consideration.

Will make net estimates on weighted blinds or on special designs from architect's details.

DIRECTIONS FOR ORDERING.

Give the exact measurement of the opening which the blinds are to fill. Where guideways take the place of stops, state distance from face of casing to inner face of lower sash. If windows are circle head or segment inside, send exact pattern or give radius. Full information for adjusting these blinds accompany each order.

For prices of these blinds see page 33 of our price supplement accompanying this catalogue.

INTERIOR OF FACTORY.

View in our door department, where the cores for our excellent veneered doors are prepared for the gluing room.

PAINTED PANEL DOORS.

200
4 Panels, O G Sticking.

201
5 Panels, O G Sticking.

We carry these doors in stock ready for immediate shipment in following sizes only:

2- 6x6- 6	1 $\frac{1}{8}$ and 1 $\frac{3}{8}$ inches thick.
2- 8x6- 8	1 $\frac{1}{8}$ and 1 $\frac{3}{8}$ inches thick.
2-10x6-10	1 $\frac{1}{8}$ and 1 $\frac{3}{8}$ inches thick.
3- 0x7- 0	1 $\frac{1}{8}$ and 1 $\frac{3}{8}$ inches thick.

These doors are made of thoroughly kiln-dried materials, will stand as well as any door made. They are well covered by two coats of specially prepared French drab paint applied by hand with a brush by skilled painters. All of our painted doors have an elegant gloss finish.

FOR NET PRICES SEE OUR CURRENT DISCOUNT AND PRICE LIST.

PAINTED SASH DOORS.

210

2-Panel 4-Light Sash Door.

211

2-Panel 2-Light Sash Doors.

We carry these doors in stock ready for immediate shipment in following sizes only:

2- 6x6- 6	1 $\frac{3}{8}$ inches thick.
2- 8x6- 8	1 $\frac{3}{8}$ inches thick.
2-10x6-10	1 $\frac{3}{8}$ inches thick.
3- 0x7- 0	1 $\frac{3}{8}$ inches thick.

These doors are made of thoroughly kiln-dried materials and will stand as well as any door made.

Our painted doors have always been the standard of excellence. Many manufacturers dip their doors in a paint vat and then drain them off. These doors can always be distinguished by their appearance around the mouldings and panels. Our doors are always painted by hand.

FOR NET PRICES, BOTH OPEN AND GLAZED, SEE OUR CURRENT DISCOUNT AND PRICE LIST.

PAINTED SASH DOORS.

SPECIAL DUTCH DOOR.

R 830

This door is made in two parts as shown by section.
The top section is hinged so as to swing into the hall while the lower section remains locked.

When required the entire door can be opened the same as a single door.

Most of the designs on pages 116 to 121 can be made in this manner.

We make these doors to order of soft or hard woods.

For prices in soft woods see page 46 of our price supplement accompanying this catalogue.

See pages 144 to 165 regarding birch as an interior finish.

For designs of front doors carried in stock see pages 94 to 105.

SPECIAL DOUBLE FRONT DOORS.

R 831

R 832

These designs are drawn for double door openings. In ordering double doors always state if they are to be rabbeted in center or left plain for astragal joint. If rabbeted, state which door opens in as you face them on the outside. If astragal is wanted state which style—see page 439.

Other designs, pages 112 to 121, can be made in pairs when desired.

We make these doors to order of soft or hard woods.

For prices in soft woods see page 46 of our price supplement accompanying this catalogue.

See pages 144 to 165 regarding birch as an interior finish.

For designs of front doors carried in stock see pages 94 to 105.

STORE DOORS.

**R 1000**

Not made for shutters.

**R 1001**

Made for shutters.

Right side of cut shows shutters in place.

These doors made any size or thickness to order in all woods.

For list prices in ordinary sizes see page 47 in price supplement accompanying this catalogue. In ordering state if they are to be rabbeted together in center or left plain for astragal joint.

If rabbeted, state which door opens in as you face them on the outside.

If astragal is wanted state which style—see page 439.

We never furnish astragals or rabbet doors unless ordered.

SPECIAL STORE DOORS.

R 1002½

R 1003½

These doors made any size or thickness to order in all woods.

For list prices in ordinary sizes see page 47 in price supplement accompanying this catalogue.

In ordering state if they are to be rabbeted together in center or left plain for astragal joint.

If rabbeted, state which door opens in as you face them on the outside.

If astragal is wanted state which style—see page 439.

We never furnish astragals or rabbet doors unless ordered.

STORE FRONTS.

For the convenience of our customers we have prepared the entirely new and practical designs shown on pages 127 to 130, drawn to a scale with large scale details. These drawings show ordinary proportions and the construction of the fronts in all their parts. They will be found of great convenience in ordering, and erecting the work at the building. In ordering or asking for estimate always furnish the following information:

FIRST—With or without glass.

SECOND—If glass is wanted state whether plate or double strength.

THIRD—With or without recess for doors and side lights.

FOURTH—For frame or brick building.

FIFTH—State if sash, doors, transoms and panels only are wanted or the front complete except bulkheading. The bulkheading is made of flooring, which every dealer carries in stock, and we never include same unless so instructed.

MEASUREMENTS REQUIRED.

Give all measurements indicated by the following letters, shown on small scale plan and elevation. A. B. C. D. E. F. G. H. K. M.

Some of these letters are also used in the larger details, to indicate the same parts more clearly. By closely following above suggestions much time and trouble will be saved all parties concerned.

INTERIOR FINISH.

We make a specialty of fine interior finish in soft or hard woods. Where architect's details are furnished (unless instructed to the contrary), we follow them closely, observing the lines and spirit of the drawings throughout. Four things are required to produce good mouldings—dry lumber, sharp knives, high speed of the cutting heads and slow feed. This is what we give our customers and that is why architects and owners favor our work.

For designs of interiors finished in "unselected" birch
see pages 146 to 159.

CAP TRIM.

For Windows and Doors. Made of any Wood.

**R 1025**

Above cap is made of mouldings 8393, 8394 and 8395.

List price complete, for openings 3 ft. wide and under, knock down.....\$0.65

**R 1026**

Above cap is made of mouldings 8399 and 8400.

List price complete, for openings 3 ft. wide and under, knock down.....\$0.80

**R 1027**

Above cap is made of 8401, 8402, 8403, 8404.

List price complete, for opening 3 ft. wide or under, knock down.....\$0.85

**R 1028**

Above cap is made of 8405, 8406, 8407, 8408, 8409.

List price complete, for opening 3 ft. wide and under, knock down.....\$0.95

For openings wider than 3 feet, add to above prices for each additional foot or fraction thereof, 25 per cent.

Always state whether you want them put together or K. D.

We make extra charge for putting caps together.

CAP TRIM.

For Windows and Doors. Made of Any Wood.

**R 1029**

Above cap is made of mouldings 8410, 8411, 8412, 8413.

List price complete, for opening 3 ft. wide and under, knock down.....\$1.05

**R 1030**Above cap is made of mouldings 8410, 8411, 8412, and small dentil mould $\frac{5}{8}$ x $\frac{3}{4}$ inches.

List price complete, for opening 3 ft. wide and under, knock down.....\$1.15

**R 1031**

Above cap is made of mouldings 8393, 8394, 8395, and thin carved blocks as shown.

List price complete, for opening 3 ft. wide and under, knock down.....\$1.60

**R 1032**

Above cap is made of mouldings 8405, 8406, 8407, 8408, turned bead and carving planted on as shown.

List price, (without carvings) for opening 3 ft. wide and under, knock down.....\$1.05

For price of carvings see page 142.

Always state whether you want them put together or K. D.

For openings wider than 3 feet, add to above prices for each additional foot or fraction thereof, 25 per cent.

ABOVE PRICES SUBJECT TO MOULDING DISCOUNT,

COMPOSITION ORNAMENTS.

The composition ornaments shown on opposite page are made to closely resemble the wood in grain and color on which they are to be mounted. It is impossible to produce in wood the beautiful detailed effects obtained in these goods and the material used is much more durable than wood carving. The prices given below are for the ornaments only mounted on the caps the size noted. This will enable you to use any detail of cap trim or wood desired, without affecting price of ornaments.

For openings 3 feet in width and under, 6 to 7 inches high between neck and cap moulding.

R1040.....	\$3.60
R1041.....	3.00
R1042.....	3.00
R1043.....	3.00

Larger sizes in proportion.

For prices of these ornaments unmounted, carefully packed in box for shipment, deduct 15 per cent. from prices quoted above.

For genuine wood carvings and rosettes see pages 142 and 143.

UNSELECTED BIRCH.

A SPLENDID HARDWOOD. EXCEEDINGLY LOW IN PRICE.

The interior of your buildings can be fitted out with hardwood trim and veneered doors in the following effects at very low prices:

NATURAL BIRCH, BLACK WALNUT
MAHOGANY, CHERRY, BUTTERNUT

and many other imitations equally effective.

For doors see, pages 104 to 107. For mouldings and interior designs
see pages 146 to 165.

"UNSELECTED BIRCH."

The term, "unselected birch," refers only to the color of the wood (NOT THE QUALITY). Our unselected birch goods are free from defects, such as knots, shake and check. The doors are as durably constructed as any hardwood veneered doors on the market, and the trim carefully and smoothly manufactured. The heart of a birch log is reddish brown, and the outside portion, or sap, is white. When selected for color the heart is known as "selected red birch," and the sap "selected white birch." The selected birch is, therefore, much more expensive than the unselected. Our unselected birch stock veneered doors and trim run more strongly to red than to white in color. The variegated color effect of unselected birch, when finished natural, is rich and pleasing, but where an even color is wanted it is cheaply obtained by staining. Where customers desire, we will do the staining for them at a reasonable extra price.

AUDITORIUM HOTEL BUILDINGS, CHICAGO.
FINISHED IN "UNSELECTED" WISCONSIN BIRCH.

The new building to the left of picture is the new 'Annex' finished throughout above first floor by us in "Unselected" Wisconsin birch, stained mahogany, see sample on page 149. This finish is supposed by many guests to be genuine mahogany, so perfect is the imitation.

COLOR SAMPLES OF "UNSELECTED" WISCONSIN BIRCH.

STAINED "GOLDEN BIRCH."

The upper part of this sample is white and the lower red. Notice that the stain fully equalizes the color.

STAINED "MEDIUM MAHOGANY."

The upper part of this sample is red and the lower white. Notice that the stain fully equalizes the color.
See instructions for finishing, page 147.

INSTRUCTIONS FOR FINISHING "UNSELECTED" WISCONSIN BIRCH.

The methods that apply to the finish of hardwoods in general are applicable to birch. The first requisite is perfectly dry material. Many architects, contractors and owners do not realize that any and all woodwork after being once thoroughly kiln-dried and then exposed (in the white) rapidly absorbs moisture in the degree that may exist in the atmosphere to which it is exposed. Thus, **perfectly kiln-dried goods** after being exposed (in the white) in warehouses, freight cars, or newly constructed buildings are liable to be unfit for a satisfactory finish, either paint or varnish. After the woodwork is in place, the building should be heated to a temperature from 10° to 30° warmer than normal, and maintained night and day for a period of not less than two weeks, this precautionary measure will absolutely prevent the unsightly appearance of open joints and unfinished lines of exposed wood caused by shrinkage after finish is applied. The results illustrated by color reproductions on preceding and following pages are obtained by applying one coat of stain and one coat of shellac. To this foundation should be added two coats of standard varnish. The smooth, mirror-like finish so desirable is produced by rubbing the varnished surface, the height of the polish being regulated by the amount of rubbing and polishing done. Any painter familiar with use of stain and varnish can produce the color effects and finish of our samples. The staining or filling of both face and back of hardwood work before shipping closes the pores of the wood and prevents much of the trouble caused by swelling from exposure during or after shipment. It sometimes happens in the smaller towns that there is a scarcity of painters or finishers familiar with staining hardwood work. For these reasons we will, when requested, stain the work before shipping at reasonable extra price for labor, materials and extra packing. We invite correspondence and will quote prices promptly.

COLOR SAMPLES OF "UNSELECTED" WISCONSIN BIRCH.

STAINED WALNUT.

The upper part of this sample is white and the lower red. Notice that the color is equalized by the stain.

FINISHED NATURAL.

The upper part of this sample is red and the lower white. The variegated color effect is preferred by many critics to any other finish.
See instructions for finishing on page 147.

COLOR SAMPLES OF "UNSELECTED" WISCONSIN BIRCH.

STAINED CHERRY.

The upper part of this sample is white and the lower red. Notice that the color is equalized by the stain.

STAINED LIGHT MAHOGANY.

The upper part of this sample is red and the lower white. The stain so fully equalizes the color that the difference cannot be seen.
See instructions for finishing on page 147.

STAIRWORK.

We have a large and most complete stair department in charge of a competent stair builder of long experience. Where desired we send a working plan drawn to a scale upon receipt of order with complete measurements. This enables our customers to check up and correct any misunderstandings that might possibly occur, before the work is too far advanced. All designs on pages 170 to 205 are absolutely new and original and develop many pleasing features. All newels and balusters are drawn to a scale and are therefore seen in proper proportions. We have priced the rails, newels and balusters on each page for ready reference. No prices on complete stairways have been made, as no two stairways are built exactly alike in width, height and plan, and prices are therefore misleading. We will be pleased to make close estimates on any of the designs shown on receipt of design selection, kind of wood and the measurements indicated on opposite page.

DIRECTIONS NECESSARY FOR ORDERING OR SECURING ESTIMATES
ON STAIRWAYS.

FIRST. Give rough or scale plan of main floor and floor above, with careful measurements of space to be occupied by the stairs on the main floor and rough well hole opening on floor above.

SECOND. Give height from top of main finished floor to top of finished floor above.

THIRD. On open stairs give width of stairs from finished plaster wall to outside face of rough carriages. If box stairs give width between finished plastered walls.

FOURTH. Give width of joist on floor above main floor and state whether single or double floor on floor above main floor.

FIFTH. Where carriages are already in place give number of treads and risers and the width of tread and height of riser as cut out on the carriages.

NOTE. All treads are made $1\frac{1}{2}$ inch thick and risers $\frac{3}{8}$ inch thick, and no rough carriages are furnished unless we are instructed to the contrary.

STARTING NEWELS.

R 1260

Price, Each, \$5.00.

R 1261

Price, Each, \$7.00.

R 1262

Price, Each, \$10.00.

Above prices are for newels of plain oak, with shaft 6 x 6 inches.
For yellow pine, deduct 5 per cent. For quartered oak, add 25 per cent.

Unless otherwise instructed we will make base to receive one riser only.

A proportionate extra charge is made for newels with bases to receive more than two risers.

These newels will be found in the stair designs on following pages.

PORCH MATERIALS.

The large and massive porch of classic design is now recognized as a necessary feature of the modern residence. But few manufacturers or persons aside from the leading architects are posted as to their proper proportions, and the appearance of many otherwise handsome buildings is therefore ruined. Even the careless observer of these improperly built porches will know there is something wrong with the building but would be unable to say just how to remedy the evil. We have made a careful study of this subject and are prepared to furnish our customers with porch materials of excellent design and manufacture at competitive prices. On page 218 will be found the details of a standard design with all parts in proportion and properly named. The use of the terms shown on this design in correspondence will save delays and misunderstandings. Always send a floor plan design and complete measurements in ordering or asking for estimate on porches. We invite your careful inspection of the following pages, as they will greatly assist you in handling your customers.

PORCH COLUMNS.

The prices named below are for designs on opposite page in the diameters most commonly used. The height of each column as given is in correct proportion to the diameter of the design selected.

Design Number.	Name.	Diam. of Shaft at Base.	Diam. of Shaft at Neck.	Total Height Including Cap and Base.	Price Each Inc. Cap & Base.

ABOVE PRICES SUBJECT TO DISCOUNT.

Where a slender column is desired, place a pedestal under the column, this gives the additional height without increasing the diameter of the column. It is the invariable rule that the diameter of the column must increase proportionately with the height of the shaft. For cut illustrating this point, see designs R1861 1/2 and R1861 1/2A page 220. In these two designs the height from floor to entablature is the same but the column in design R1861 1/2 is much less in diameter than that in R1861 1/2A owing to the length of shaft in R1861 1/2 being decreased by the pedestal.

PORCH COLUMNS.

Architecturally correct in name and detail.
Scale $\frac{3}{4}$ inch to the foot.

R 1855 $\frac{1}{2}$
Tuscan.

R 1856 $\frac{1}{2}$
Doric.

R 1857 $\frac{1}{2}$
Colonial.

R 1858 $\frac{1}{2}$
Ionic.

1859 $\frac{1}{2}$
Corinthian.

NOTE: These columns are all the same diameter, but the proportionate height varies in the different orders of architecture. We make these columns from 6 to 36 inches in diameter and height in proportion. The shaft is built up of staves locked together in the most careful manner and will not open up at the joints. The ornamental capitals are made of composition for exterior use. We have classic models and tables giving proper proportions of the various parts and unless instructed to the contrary make our columns correct in every detail. If given the height and style of column will gladly advise our customers the proper diameter and general proportions so they can order correctly.

For prices of columns as shown above, see opposite page.

CLASSIC PORCH DETAILS.

See complete elevation on opposite page.

In above details the following designs are employed: Column, R1858 $\frac{1}{2}$ with pedestal; Top rail, R1941 $\frac{1}{2}$; Bottom rail, R1942 $\frac{1}{2}$; Baluster R1900 $\frac{1}{4}$.
Read pages 215 and 217 regarding porch work.

CLASSIC PORCH DESIGN.

See details on opposite page.

COMPLETE ELEVATION OF DESIGN R 1860 $\frac{1}{2}$ A

The details on opposite page are carefully drawn to a scale and the total height from porch floor to top of balcony newel is divided into 22 equal divisions. These divisions show the proportionate relation of column, pedestal, entablature and balcony balustrade, to each other.

CLASSIC PORCH DETAILS.

R 1940.	Size 2 $\frac{3}{4}$ x3 $\frac{3}{4}$ inches for 1 $\frac{3}{4}$ balusters, per lineal foot.....	\$0.18
R 1941 $\frac{1}{2}$.	" 4 $\frac{3}{4}$ x2 $\frac{3}{4}$ " 1 $\frac{3}{4}$ " " "	.32
R 1942 $\frac{1}{2}$.	" 3 $\frac{3}{4}$ x2 $\frac{1}{4}$ " 1 $\frac{3}{4}$ " " "	.22
R 1943 $\frac{1}{2}$.	" 2 $\frac{3}{4}$ x1 $\frac{3}{4}$ " 1 $\frac{3}{4}$ " " "	.08
R 1944 $\frac{1}{2}$.	" 4 $\frac{3}{4}$ x2 $\frac{3}{4}$ " 1 $\frac{3}{4}$ " " "	.32
R 1945 $\frac{1}{2}$.	" 3 $\frac{3}{4}$ x2 $\frac{3}{4}$ " 1 $\frac{3}{4}$ " " "	.26
R 1946 $\frac{1}{2}$.	" 4 $\frac{3}{4}$ x2 $\frac{3}{4}$ " 1 $\frac{3}{4}$ " " "	.32
R 1948.	" 1 $\frac{3}{4}$ x1 $\frac{3}{4}$ " 1 $\frac{3}{4}$ " " "	.06

If above rails are wanted for heavier balusters it is not necessary to increase thickness, simply add to width of rails the difference between 1 $\frac{3}{4}$ balusters and the size required. Example: R1941 $\frac{1}{2}$ is 4 $\frac{3}{4}$ inches wide for 1 $\frac{3}{4}$ -inch baluster. If made for 2 $\frac{1}{4}$ -inch baluster the width would be 5 $\frac{1}{4}$ inches.

PRICES OF GABLE ORNAMENTS, CRESTINGS AND FINIALS.

Shown on opposite page.

GABLE ORNAMENTS.

In ordering the gable ornaments shown on opposite page, always give the pitch of roof and the length of extension down the rafter.

Prices quoted below are the usual sizes ordered.

R2018.	To extend 6 feet down rafter.....	\$7.00
R2021.	“ 6 “ “ “	7.00
R2024.	“ 6 “ “ “	8.00
R2027.	“ 6 “ “ “	7.00

FINIALS.

In ordering the finials shown on opposite page, always give the pitch of the roof, the length of bracket down the rafter and the height of the post in center.

Prices quoted below are for usual proportions ordered as follows:

R2022.	Posts $3\frac{3}{4} \times 3\frac{3}{4} \times 3$ ft. 6 in. Brackets $1\frac{3}{8}$ in. thick, extending 18 in. down roof.....	\$3.00
R2025.	“ $3\frac{3}{4} \times 3\frac{3}{4} \times 3$ “ 6 “ “ $1\frac{3}{8}$ “ “ 18 “ “	2.50
R2028.	“ $3\frac{3}{4} \times 3\frac{3}{4} \times 3$ “ 6 “ “ $1\frac{3}{8}$ “ “ 18 “ “	3.00

CRESTINGS.

For ridge finish of roofs.

In ordering the crestings shown on opposite page, always give thickness and height required and height of ends.

Prices quoted below are for the usual sizes ordered as follows:

R2019.	Cresting only, $1\frac{1}{8} \times 7\frac{1}{2}$ inches per lineal foot, \$0.18. End finish.....	each, \$0.50
R2020.	“ “ $1\frac{1}{8} \times 7\frac{1}{2}$ “ “ “ .20. “	“ .50

Send plan, giving sizes of columns and newels and spaces between columns for railing in ordering or asking for estimate.

COMPOSITION CAPITALS.

The details and proportions of these capitals and brackets are perfect, and the material used is much more durable than wood.

The drawings on opposite page illustrate Ionic capital R2154 with necking (Empire), as applied to a column showing the wood shaft and core running through the capital supporting the entablature above. The plans of the different abacus forms as given will serve as a further illustration of the relative position of shaft and capital.

All our capitals are furnished as shown in this catalogue, each capital having a complete finish to connect with shaft. The diameter given in catalogue represents the diameter of column at neck. The height given is the exact height of capital. Always allow a trifle more height for your core so the weight will rest on shaft and not on capital, $\frac{1}{8}$ of an inch up to a 10-inch diameter; $\frac{1}{4}$ of an inch above that size will be sufficient to insure a safe application.

The thickness of our material is one inch up to a 10-inch diameter capital, making the core of a 10-inch diameter capital 8 inches, of an 8-inch capital 6 inches. Above 10 inches allow $\frac{1}{8}$ of an inch more for the thickness of material for every two inches of increased size, making core for a 14-inch diameter capital $11\frac{1}{2}$ inches, a 16-inch capital $13\frac{1}{4}$ inches, etc.

In ordering capital, give number of design and diameter of column at neck; also state material wanted, viz.: whether Exterior Composition, warranted to stand in any climate, or Interior Composition, made with grain to match any wood. (Interior Composition has a solid wood body requiring no core on column. Always state the kind of wood and finish.)

The sizes of our brackets given are:

- 1st. The entire width across abacus moulding.
- 2d. Width of face on body.
- 3d. Drop or length.
- 4th. Projection.

READ ABOVE CAREFULLY WHEN ORDERING.

For columns see pages 216 and 217.

GRILLES AND ARCHES.

In preparing the designs of grilles, and arches shown herein, care has been exercised to make the line the most complete, artistic and practical ever offered the trade.

Our long experience in manufacturing these specialties has taught us the best methods of construction. Our splendid facilities reduce the cost of production to the minimum, thereby enabling us to place in your hands a perfect article at lowest prices.

We solicit your correspondence, and will much appreciate your orders.

CASED OPENING,
WITH COLUMNS.

R 2278

Capitals of composition made to match wood-
work. Shaft of column staved and
fluted. Pedestal paneled
as shown.

Jambs of opening must be as wide as widest part of pedestal.

The trim around each side of jambs must match the other trim in rooms connected by opening.

Prices quoted upon receipt of size of opening, width of jambs, designs of trim and kind of wood wanted.

HARDWOOD MANTELS.

On the following pages we show our complete line of mantels and fittings. We use only thoroughly kiln dried lumber of selected figure, and the goods are made by the best mechanics to be found anywhere. Do not confound these high-grade goods with the many so called cheap lines of goods now on the market. A mantel is an article of furniture and should be well made and finished. Our goods will please the most critical buyer.

FINISH. Oak mantels can be finished natural, antique, golden, weathered and old English or Flemish colors. Golden oak is very popular and unless ordered otherwise we will ship in this color. Birch mantels are finished in natural or to imitate mahogany or cherry. Samples mailed free upon request. If mantel is to match other finish in color, send sample and we will furnish same color.

SIZE. All stock mantels are five feet wide, which is the regular standard size. (Always state width of mantel and your grate selection in order.) Special sizes, smaller or larger than five feet wide, are made to order at extra price. Our mantels are carried in stock (in the white) and have to be filled and varnished to order. This process usually requires two weeks time.

TILES. Our stock consists of the latest and most artistic colors or shades, such as ivory, cream, beautiful tints of green, old rose and delft blue. Also a full assortment of mottled onyx colors. If no preference is specified in your order, we select and ship colors that best harmonize with mantel and wood. Samples mailed free.

GRATES. On pages 296 to 300, we give a complete description of the different kinds of coal, wood and gas grates supplied with our mantels. Every grate is thoroughly fitted, finished and constructed to burn economically and cleanly, requiring little care to obtain a cheerful and satisfactory fire with all the beautiful features of an open fire-place. Kindly specify grate wanted.

SPECIALS. Fancy woods, such as birdseye or curly maple, curly birch, genuine mahogany, white and gold, etc., also special sizes made to order at reasonable prices on application.

Cement, fire clay and fire brick are not sent, as the same can be bought in your town for less than the freight would amount to.

Tile facings for mantels are mounted in slabs (when so ordered) at \$4.00 per set extra, subject to mantel discount.

Full and complete plans for setting tile accompany every shipment.

We also furnish tiles for bath room floors, wainscotings, store floors and for all other purposes. Send for designs and prices stating quantity required.

For general instructions see pages 294 and 295.

DIRECTIONS FOR SETTING WOOD MANTELS, TILE AND FIRE-PLACES.

See illustration on opposite page.

See that your chimney is well built and sound, and an arch is turned for the hearth. Put all the tile to soak in clean water. They may remain there an hour or more and then be laid out to drip. In the box with the tile will be found a diagram showing how the hearth is to be laid out. See illustration on opposite page. Place the mantel against the wall and mark out the hearth. Take careful measurements of the profile of mantel, the tile opening, etc., also mark the chimney where the screws go through the mantel to hold it in place, and remove the mantel. Cut out the floor to the proper size and lay in the concrete or the foundation to within an inch of the floor level. The concrete may be made of gravel and common cement. (Some prefer to lay in common brick; if this is done the brick must be well soaked before laying the cement and tile on them.) Examine the diagram and lay out the hearth on the floor convenient enough to be picked up piece by piece and put in place. When the concrete has set, mix some Portland cement (one-third cement and two-thirds clean sharp sand) and place this on the concrete thick enough to raise the tile one-eighth inch above the floor. When you have the cement in smooth and level, lay the tile on it, commencing on the outside as per diagram. After the tile are all laid in and fitted nicely to place, wedge them all around to keep them from spreading and hammer them down lightly with a wood block or a smooth piece of board to the level of the floor. When you have got them all nicely in place, level and evenly spaced, mix a little of the Portland cement quite thin and wash it over the surface, working it into the joints where needed. After this has partially set wipe the tile perfectly clean with sawdust or shavings or whatever you have handy. All of the cement should be cleaned off, as it is very difficult to remove it after it has set. Drill and plug the chimney where the screws take hold to fasten the mantel.

As an assistance to you in the above work, study well the illustration on opposite page.

You have already got the profile, etc., of the mantel. Now lay up the piers, then take the iron arch-bar, lay it across from pier to pier and build the arch on them, making it high enough to fill the opening and a trifle over. Now, the arch-bar is as high as the frame, and the piers far enough apart to allow the fire-brick to go in and the frame to fit all around. Set the grate into the fire-place to get the proper angle, and build the fire-place of the fire-brick as shown, leaving about three-quarters of an inch play all around the grate. Use fire-clay to lay up the fire-brick with. Cut the fire-brick on the sides so as to allow the back brick to rest against them, and draw in the sides to fit the damper. Fill in behind the inclining back with bats and mortar. All this has been done leaving a space of seven-eighths of an inch from the face of the masonry to the profile of the mantel in which to put the cement and tile for the facing, except where the edge of the fire-brick is caught by the frame. Set the metal frame in place, blocking it away from the face of the masonry where necessary, and anchor it to the masonry with the wires. Mix Portland cement for the facing, half and half with clean sharp sand, and set on the facing tile as shown on plan in box with tile, breaking joints and setting the tile so that no opening will show between them and the frame or mantel, using care to keep them plumb and the surface even, finishing the work same as in the hearth.

Drive some wood plugs into the chimney where the screws go through the mantel, and when the mason and tile work is perfectly dry, screw the mantel to place, using the wood buttons to cover up the screw holes.

"Tiles can be cut, if it is necessary, by scratching the enamel with a hard sharp steel instrument, like a cold chisel or sharpened file, and then striking them on the back, opposite the scratch, with a light hammer. The edges can be ground smooth, if wished, on a fire-brick."

The profile is the projection of the tile facing of mantel from face to chimney and represents the distance the face of tiling must be set from face of chimney.

See illustration on opposite page.

SECTION ILLUSTRATING INSTRUCTIONS ON OPPOSITE PAGE.

Note.—All our hearths are sent out the width of the mantel ordered and the depth shown under each design. We make extra charge for larger hearths. A plan is enclosed in the box with the title for both facing and hearth, showing exact position of each piece and the number of pieces required. The hearths are always laid out before being packed so no shortage will occur.

COMBINATION GRATES FOR WOOD MANTELS.

R 2280

Combination Grate, without Summer Front.

R 2280

Combination Grate, with Summer Front.

This grate is unexcelled for burning wood and soft coal; the basket or fire pot is heavy cast iron, very serviceable; the steel frame has projecting canopy at top. The summer piece is of ornamental steel, cannot break and as it is light in weight is easily put in place; not at all like the heavy cast iron fronts.

ABOVE PRICES SUBJECT TO DISCOUNT.

This grate consisting of steel frame oxidized triple brass or copper plated, with black basket grate and ash screen.
Size $24\frac{1}{2}$ in. x $30\frac{1}{4}$ in. \$5.50
" $30\frac{1}{2}$ " x $30\frac{1}{4}$ " 8.00

Add for extra parts if wanted:

Summer front \$2.50
Flue damper 1.90
Blower 1.00
Arch bar 50

The $24\frac{1}{2}$ in. frame has grate 20 inches wide and 8 inches deep. The $30\frac{1}{2}$ inch frame has grate 24 inches wide and 8 inches deep.

Grate, Sectional View.

The above illustrates Combination Grate in position, with anchor support resting on brick, the same passing under lugs which support basket.

Note.—This grate does not include fire brick, as same can be bought in your town for less than the freight would amount to. The small grate requires 35 and the large grate 42 fire brick.

GAS GRATES FOR WOOD MANTELS.

R 2282
Gas Grate Open.

This grate consisting of complete asbestos gas grate and summer piece of heavy steel oxidized brass or copper plated.

Size $24\frac{1}{2}$ in. x $30\frac{1}{4}$ in. \$13.00
" $30\frac{1}{2}$ " x $30\frac{1}{4}$ " 16.00

R 2282
Gas Grate Closed

This grate is fitted with our latest improved five row steel burners, spreading one continuous sheet of fire over the asbestos back, and radiating at least one-third more heat than can be produced by any other gas grate with the same amount of gas. It has projecting canopy top, also gas valve, mixer and copper reflectors. Grate is all put together complete, ready for use.

Economy, cleanliness and beauty are features that have been admitted by all who have used them; each grate produces the greatest possible heat for the gas consumed, the combustion being as near perfect as it is possible to get in a grate. Burns any and all kinds of gas—natural, artificial, gasoline gas, etc. Is more economical than coal. Try one and be convinced.

Note.—Please be particular to specify kind of gas you intend to burn in a grate when ordering same

PARQUETRY FLOORS.

These floors are not a fad, they have been in use in Europe for centuries. With a little care they will last a lifetime. Carpets are more expensive, require more labor to keep clean and are very unhealthy. A servant of average intelligence can keep parquetry floors as if they were newly laid with but little effort. A hardwood floor is absolutely "Hygienic"; ask your physician about it. New homes are rarely built without parquetry floors, and they are rapidly replacing carpets in the older buildings. They are 5-16 inches thick, less than the ordinary threshold, so they can be laid in one room over the old floor and not interfere with the other rooms or doorways. Anyone familiar with the use of a saw, hammer and varnish brush can lay and finish them. Send us a plan of your rooms with exact measurements, as on page 329, and select your design. We can then make you exact estimate of cost and a working plan will be sent with the invoice for the goods showing just where each piece is to be laid. See directions for laying and finishing, pages 326 and 327.

PARQUETRY FLOORS.

DIRECTIONS FOR LAYING.

LAYING WOOD CARPET. Start at the wall, removing the quarter round, then measure out into the room from the wall the width of the first breadth of carpet, and tack down the strips marked "A" in the following cut. Measure your space thus framed for the center, to make certain it will contain other breadths, as planned, be sure that the corners turned by this strip are square, lay and brad the breadths in center of room, then put down the outside breadth, bringing it up to the strip first laid. The quarter round should cover the rows of brads next the wall.

NAILING WOOD CARPET. Drive the brads in rows about 9 inches apart, placing a brad at each edge of each slat, as shown in this cut:

Use a $1\frac{1}{4}$ -inch No. 15 wire brad. After the whole has been bradded down, go over and with a punch not larger than the head of the brad, sink each brad 1-16-inch below the surface of the wood.

SMOOTHING OFF. After the brads are all driven and countersunk, go over the floor carefully, and wherever any of the joints are found uneven, make smooth with a steel scraper in the hands as shown. Any hammer marks indenting the wood should be scraped out, as they will show when the polish is on.

LAYING PARQUETRY. The pattern fields are usually laid beginning at the center of the room. First find the border line, and tacking down a strip to frame in the center or field, start in center of the room and work out to the sides and ends until the border line is met, when the strip can be taken up and the border laid in its place, filling out to the wall as planned.

NAILING PARQUETRY. Brads are driven to suit the pattern. Each piece of wood in the pattern, unless very small, should be securely nailed down and countersunk for scraping.

PARQUETRY FLOORS.

DIRECTIONS FOR FINISHING.

SANDING. After the floor is scraped, go over the entire surface with No. 1½ sandpaper, first with the grain and then across the grain. It will be found easy to do this by placing a half dozen sheets of the sandpaper under the weighted brush, which are held in place by being tacked at the sides of the brush block.

FILLING. Clean off the floor carefully to remove all dust and grit from sanding, apply our Paste Wood Filler to the surface of the wood with a brush, going over no more surface at a time than will admit being cleaned off before hardening. After the filler has set, rub off with excelsior or cloth, rubbing across the grain when practicable. Allow the filler twelve hours, at least, to dry.

PUTTYING. Go over the entire floor and putty up each nail hole to match the wood, then sand again lightly to clean the surface of filler and putty marks.

VARNISH FINISH. Wipe the floor off thoroughly and apply a coat of Floor Varnish with a brush; allow it twelve hours or more to dry, second or third coat, according to the finish desired.

WAX FINISH. After one coat of Floor Varnish sand the surface, wipe off and apply a coat of the Wax with a rag, spreading it out thin in all directions. Allow it about half an hour to dry, then take a stiff brush (one of our weighted ones preferred, see page 325), and rub the floor across first, and with the grain afterward. A piece of dry cloth, felt or carpet placed under the brush, will give the finishing gloss.

CAUTION. Never use soap or water in cleaning hardwood floors. Take up ordinary dust and dirt with a soft cloth wrapped around a broom. Where badly soiled, clean with a soft cloth dipped in turpentine—touch up with wax or varnish.

	Walnut.....	1½	2	2	3
	Maple	1½	1¼	2	2

WOOD CARPET.

5-16 INCH THICK.

This flooring material is made of hardwood strips, 1½ inches wide, glued to heavy cotton cloth. It is made in widths of 27 inches and 36 inches and in sections containing 4 yards. Any quantity can be taken by simply slitting the cloth between the slats. The widths can be ripped to 6, 9, 12 or 18 inches, to be used as borders or margins next the walls, at a slight additional cost for cutting.

PRICE LIST OF WOOD CARPET.

ORNAMENTAL GLASS.

Beautiful effects in glass are now produced by many processes. The following pages exhibit a complete line of new and original designs for all classes of buildings. Two entirely new features have been added to the large assortment: Battenberg lace effects on glass, pages 354 and 355, and leaded white and clear glass, page 366. We make a specialty of church and society windows, and show a number of emblems, in proper coloring, on page 379. We will also furnish special designs in water colors upon receipt of complete specifications. Our leaded glass is designed by artists, and constructed in the most approved manner by skilled workmen. We use only best qualities of glass and materials.

All goods are carefully packed and boxed
to prevent damage in transit.

BUILDING AND ROOFING PAPERS.

ROBERTS.

Rosin sized sheathing, **30** lbs. to the roll.

EUREKA.

Rosin sized sheathing, **20** lbs. to the roll.

Each roll contains **500** square feet.

These papers are made especially for our trade.

They are strictly felt filled and therefore better adapted to withstand moisture and cold than the ordinary pulp filled stock.

We can also make prompt shipment of the following at market prices:

PLAIN BOARD	700	square feet to	100	pounds.
TARRED BOARD	600	" " "	100	"
INODOROUS BOARD	600	" " "	100	"
TARRED FELT	650	" " "	100	"
THREADED FELT	500	" " "	to the roll.	
DEADENING FELT	1½	pounds to the square yard.		
CARPET LININGS	50	yards to the roll.		

VULCANITE ASPHALT ROOFING.

Coated both sides with Silicate.

No painting required. Will last a lifetime.

Guaranteed to contain no coal tar.

Positively the best roofing on the market.

Carried in stock in three weights. Light, Heavy and Extra Heavy.

Each roll will cover **100** square feet.

Send for samples and book of information.

THREE-PLY BLACK DIAMOND ROOFING.

We are also prepared to ship quickly this well known roofing with all supplies for finishing complete.

Each roll will cover **100** square feet.

Prices quoted on application.

Special prices for orders of **25** rolls or over.

IMPORTANT NOTICE.

When moulding is priced by the inch *it is in all cases understood* that the price is based on ripping width of lumber, that is: $\frac{1}{4}$ of an inch wider than the finished size of moulding. For example: A $\frac{7}{8}$ inch thick panel moulding, if made to finish $1\frac{1}{4}$ inch wide, would be charged as 2 inches (being ripping size); to finish full 2 inches, would be charged as $2\frac{1}{4}$ inch, etc.

Approximate weight of Mouldings, 1x1 inch per 100 lineal feet, 15 pounds.
